Company and leadership

An Iraqi contracting and trading company

Established in 2009, Atyaf Al Baher brings general contracting, trading and public transport together in one Iraqi limited liability company.

2009	17	3
Established	Projects profiled	Core activities

Experience in Iraq

The portfolio covers housing renewal, classrooms and kindergartens, village water networks, electricity distribution and institutional supplies. These assignments connect the buildings people use with the services that sustain them.

Company and leadership

Vision and mission

Our vision is to be a trusted Iraqi partner in building and sustaining the places, infrastructure and supply networks that communities depend on.

Our mission

We translate the client’s priorities into a defined scope, coordinate construction, supply and transport, and keep the client informed as decisions are made. Accountability, care, precision and partnership guide that work.

Accountability	**Care**
Precision	**Partnership**

Leadership

Hemin Ahmed, Managing Director, oversees the company’s contracting, trading and transport activities.

From the client’s brief to the site

A clear brief sets the scope and identifies decisions that affect cost, materials and sequencing. Management brings the technical and commercial teams together when an issue needs a decision and gives the client a clear point of contact.

Construction and infrastructure

Places people use every day

Housing, education and public works

Construction and infrastructure

From the ground up

Building shells, services and finishes come together around the people who will use the space.

Construction and rehabilitation

A new classroom starts with the building shell, circulation and services. An existing school presents a different task. The team must understand what can be retained, what needs repair and how new work will meet the existing fabric.

Site coordination

Excavation, concrete, masonry and finishing each need a clear work area and a delivery sequence. On rehabilitation projects, access to adjoining properties and protection of retained finishes also shape the plan.

Construction and infrastructure

Water and electricity infrastructure

Village networks depend on careful coordination between underground works, roadside access and the connections that put the network into service. Our portfolio includes network construction and extensions in Dibis and Taza.

Electricity distribution

The Al-Amal Al-Shaabi assignment brought poles, overhead lines, insulators, protection equipment, transformer bases and cabling into a single distribution scope.

Design and interiors

Interiors in detail

Design, fit-out and gypsum-board works

Design and interiors

Light, texture and proportion

The ceiling sets the rhythm of a room. Lighting recesses, joints and access panels belong in the design from the start.

Design and interior fit-out

Interior design begins with how a space will be used. Entrances, circulation, furniture positions and service access inform the layout before finishes are selected.

From drawings to finishes

We coordinate ceiling levels, partitions, lighting positions, access panels and finish junctions. Samples and finish schedules help the client assess colour, texture and maintenance needs before procurement.

Design and interiors

Gypsum-board systems

Suspended ceilings, stepped features, wall linings and partitions define a room’s proportions. Framing, board selection and service openings must be coordinated as one assembly.

Details that affect the finish

Select the assembly for the specified moisture, acoustic or fire requirements. Coordinate lighting recesses and access panels before closing the frame, then inspect joints, corners and painted surfaces under the intended lighting.

Trading and transport

From order to delivery

General trading and international transport

Trading and transport

A coordinated journey

A shipment connects supplier, carrier and recipient. Each needs the same cargo description, handling requirements and delivery window.

International transport

International transport starts with the cargo. Dimensions, weight, packaging, handling needs, origin and destination determine the movement plan and receiving arrangements.

Dispatch and receipt

Agree who prepares commercial and border documents, how shipment status will be communicated and who can receive the goods. Loading access, unloading equipment and delivery records are part of the same plan.

Trading and transport

General trading and supply

Construction materials, technical equipment and institutional goods each have different purchasing and handling needs. The item description, quantity and required delivery date define the order.

Institutional supply in Diyala

The household supply assignment for 400 families shows the link between purchasing and distribution. Suitable packaging, agreed quantities and a receiving contact give each delivery a clear destination.

Project portfolio

Housing rehabilitation

170 homes

In 2010, the housing programme covered 170 homes across Kirkuk governorate, including Hawija, Yaychi and Shwan. Work on existing dwellings across several districts called for materials and trades to reach each neighbourhood in sequence.

Project portfolio

Household supplies

400 families

Atyaf Al Baher supplied household goods and domestic essentials for 400 families through the Diyala branch of the migration authority. Packing, loading and handover linked the purchasing work to distribution.

Project portfolio

Saqizli Al-Jadida school

6 classrooms

Construction of a six-classroom school in Saqizli Al-Jadida under the governorate development programme. The 2011 contract specified a 120-day delivery period.

Project portfolio

School construction

Yaychi / Al-Zawba school

6 classrooms · 2011

Construction of a school in Al-Zawba neighbourhood in the centre of Yaychi subdistrict.

Blawa school

6 classrooms · 2011

Construction of a six-classroom school in Blawa village. The contractual period was 120 days.

Yahyawa kindergarten

6 classrooms

Construction of a six-classroom kindergarten in Yahyawa village. The 2011 contract set a period of 120 days for the work.

Aynur Kindergarten

Kindergarten rehabilitation

Rehabilitation and classroom construction at Aynur Kindergarten. The work encompassed learning spaces, masonry and the entrance to the building.

Learning environments

Between classroom and courtyard

A shaded threshold gives a classroom a second place to gather. Doorways, windows and covered routes shape how pupils move through the school day.

Design considerations

Light, shade and circulation

The depth of a canopy changes how much sun reaches a window. Durable surfaces and a clear route from the entrance to each classroom help the building serve the people who use it.

Project portfolio

Al-Anwar Primary School

April 2010

Hawija, Kirkuk governorate

Rehabilitation of an existing primary school in Hawija, Kirkuk governorate. The work added school repair to a portfolio that also includes new classrooms and kindergarten buildings.

Education portfolio

Yahyawa kindergarten	24
Rawa School	29

Rawa School

School rehabilitation

Rehabilitation and classroom construction at Rawa School. The project photographs show external masonry, building-envelope work and internal finishes.

Project portfolio

Village water networks

Bai Hassan water network

June 2010

Construction of a water network in Bai Hassan village, Dibis district.

Howara Barza water network

Dibis · 2011

Construction of the village water network in Howara Barza under the regional development programme.

Project portfolio

Water infrastructure

Al-Muzayrir water project

150 contract days

Water infrastructure in Al-Muzayrir village, Dibis district. The 2011 contract specified a 150-day delivery period.

Taza water-network expansion

Taza · 2011

Expansion and implementation of water-network works across several areas of Taza subdistrict.

Project portfolio

Al-Amal Al-Shaabi electricity network

Kirkuk · 2011

Distribution works included the supply and installation of poles, overhead lines and insulators, together with protective equipment, transformer bases and associated cabling.

Project portfolio

Electricity distribution

Balka Rash electricity connection

Shwan · 2011

Connection of Balka Rash village to the distribution network, including poles, overhead lines, insulators and protection equipment.

Al-Multaqa electricity network

2013–2014

Development and expansion of the electricity distribution network serving Al-Multaqa and neighbouring villages.

Project portfolio

Domiz property rehabilitation

6 apartments · 5 shops

Rehabilitation of the Minors' Care property in Domiz brought six residential apartments and five commercial premises into one scope of work.

People and equipment

Civil, electrical and mechanical disciplines support contracting work. Procurement, contracts, accounts, stores and documentation connect field requirements with the people and materials needed on site.

Plant and transport

Equipment categories in the company’s history include excavators, bulldozers, graders, loaders, rollers, tippers, tankers, pickups and pole-hole drilling equipment. The assignment determines the equipment required.

Delivery and responsibility

Project delivery

Define the brief and inspect site conditions. Coordinate drawings, quantities, delivery priorities and responsibilities before arranging the team, equipment and approved materials.

Execution and handover

During construction, monitor interfaces between trades and resolve changes with the client. At handover, inspect the work, close outstanding items and organize the records needed by the receiving party.

Define	**Plan**
Execute	**Hand over**

Delivery and responsibility

Quality in the finished work

Quality begins with a shared understanding of the specification. Confirm material approvals and inspection points before an installation is concealed or the next trade enters the area.

Close the record

Record decisions that affect the installation, identify defects and assign corrective work. A final review connects the completed scope to the documents handed to the client.

Materials	**Installation**
Inspection	**Records**

Delivery and responsibility

Safety on site

Plan working access, identify hazards and coordinate the movement of people, vehicles and materials.

Delivery and responsibility

Care for the surroundings

Orderly storage, responsible waste handling and respect for adjoining properties are part of planning the site.

Delivery and responsibility

Working in established communities

A school under repair, a trench beside a road and a house in an occupied neighbourhood all require attention to the people using the surrounding space. Access, storage and the timing of deliveries matter throughout the work.

Looking ahead

Our aim is to build long-term relationships through clear agreements, careful execution and work that continues to serve its users after handover.
